

Team Contribution Report

Cross-lingual Transfer between Azerbaijani and Turkish

github.com/shahinsafarli/az-tokenizer-project

The project was divided into five balanced technical work packages. Through the code, configuration, testing, and evidence phase (PR01–PR20), every member owns four repository commits. Each member contributed to both implementation and a separate validation or evidence area. The final submission artifacts were reviewed jointly by the team.

Member	Share	Primary contributions and repository evidence
Shahin Safarli	20%	Repository initialization and protection; canonical tokenization and anchor pipeline; training orchestration and grid execution; tokenization findings and overlap figure (PR01, PR03, PR08, PR16).
Suleyman Allahverdiyev	20%	Shared runtime utilities; aggregation, statistics, decomposition, error and figure diagnostics; one-command reproduction resources; statistical outputs, test ledger, and compressed run/log evidence (PR02, PR07, PR13, PR20).
Fatima Alibabayeva	20%	Dataset preparation, splitting, scrambling and truncation; data audits, stability diagnostics and training controls; core CI tests; aggregate split, error and label-agreement evidence (PR04, PR09, PR14, PR17).
Fidan Baghirova	20%	Fine-tuning engine; fertility, corpus and diacritic analysis; experiment configuration and parallel-execution tests; aggregate tables, paper summaries, and principal result figures (PR05, PR10, PR12, PR19).
Emil Jafarov	20%	Embedding-transplant primitives and evaluation; transplant controls, builders, cross-base comparisons and reporting; end-to-end tests and frozen configuration locks; transplant, norm, control and top-1 findings (PR06, PR11, PR15, PR18).

Shared finalization. The team jointly checked the final report, presentation, contribution statement, repository structure, source archive, results archive, and release readiness. Report claims are backed by committed aggregate results and the SHA-256-verified archive containing 164 run records and 164 logs.

Verification record. The complete non-slow test suite passed with 90 tests and one slow test deselected. Configuration hashes, result JSON/CSV files, figures, split manifests, archive membership, and the 164-entry held-out-test ledger were checked before submission.

Contribution declaration. The percentages summarize the agreed overall division of project work. All team members reviewed and accept responsibility for the submitted code, experimental evidence, paper, and presentation.
